

The **BETONAC**-brush reduces the loss of cleaning agent by up to 50%

Our acid-resistant brushes have been especially designed for cleaning concrete pumps and vehicles that transport concrete.

It doesn't matter how expensive or how cheap a product is It doesn't matter whether it is a good or a bad product - with a bad brush up to 90% of the cleaning agent lands on the floor. (Wasted!)

The acid-resistant brushes which have been especially designed for cleaning concrete pumps and transport vehicles for concrete, have been manufactured with bristles that hold liquid

The money saving brush

Brush **ORANGE BETONAC**
Art-No. 80212 25 cm

Brush **BI-LEVEL ORANGE**
Art-No. 80213 22, 5 cm

Brush **ORANGE BETONAC**
Art-No. 80214 25 cm
Art-No. 80215 50 cm

Brush **Blu BETONAC**
Art-No. 80216 20 cm
Art-No. 80217 50 cm

Our acid-resistant brushes have been especially designed for cleaning concrete pumps and vehicles that transport concrete. Their unique advantage is that they hold the liquid cleaning agent in the bristles.

These brushes really save you money !

Experience has shown and studies reveal that up to 90% of a liquid cleaning agent gets wasted on the way from the bucket to the surface on which it is meant to be applied. It pours onto the ground unused.

Lets do some quick sums:

Ten litres of water containing concentrated cleaning agent costs £ 4 GBP.

	% Wasted cleaning agent	Cost of Wasted cleaning agent (on the floor)
Normal brush	90 %	3.6 £ GBP
BETONAC brush	40 %	1.6 £ GBP

*Thus six times more product reaches the surface you want to clean when you use a **BETONAC BRUSH***
